

Hi Brad,

Our KasselWood steel metal roof was installed in April 2008 and we have not had any problem with it from day one. The installation was completed quickly and professionally. The work crew kept the work site tidy during the installation and cleaned up nicely after completion of the work.

During the major hailstorm that hit Calgary July 12, 2010 with loonie- and toonie-sized hails, our steel roof did not sustain damage. However, the same could not be said for houses in our neighborhood with the Interlock aluminum roof. Many dents were visible on their roof surfaces. We are glad that we have a steel metal roof rather than an aluminum metal roof.

With our neighbors looking to replace their 20-year old cedar shakes roof, we recommended Supreme Roofing Solutions and KasselWood steel metal roof without hesitation.

Sincerely,

Ken & Jennifer Wong
