

On July 26, 2012 our town was hit by a very destructive hail storm, with hail up to softball size. As a result of that, nearly every roof in the town had to be replaced.

Our roof had been a cedar shake roof and the hail completely beat it to pieces. We knew we did not want to replace it with more cedar shakes.

We had 2 main criteria for choosing the roofing - it had to be a stronger material and it had to look appropriate for a 100 year old character home. In the days following the hail storm we received many brochures from various roofing companies telling about their products.

One of these was from Supreme Roofing Solutions. Armed with all of these pamphlets I went to work researching on the internet. I studied cost and performance comparisons, how each was made and any other aspect of roofing that I could find. I soon started to eliminate many of the roofs from my list. In the end one stood out to me and that was the Supreme Roofing Solutions metal shakes or shingles. I watched videos on the internet of how they were made and read testimonials. We had pretty much made up our mind before we contacted Brad. Brad's presentation about the roofing was very informative. We did not look farther into other types as this was the type of roof we wanted.

We choose this roof because of its strength, the way it was built, the method of installation and its looks. We had also checked out other houses in town that had this roof and the damage to them from the hail appeared much less than any of the other roof systems.

The crew that installed our roof was very professional and pleasant and the installation went very well. Our house has a very tall roof with many peaks and valleys and because of the landscaping all around the house they could not get the bin or equipment right up close to the house. It was therefore a more difficult installation than some homes but they did a great job and were very careful to minimize any damage done to the landscape etc. The job was completed very quickly (about 5 days for house and garage)

When the job was completed they did a great job of cleaning up the job site- In fact they did a lot of cleaning as the job was being done and each night had it clean before they left. We were very impressed by this. We have not had time with our new roof to see how it performs yet but we are very confident that it will stand up to whatever nature may throw at it.

We are also confident that we made the right choice in roofing material. It looks great with this unique old house and we are extremely happy with the whole experience.

Thanks Brad, Nick and the whole crew.

Brad- Just wanted to thank you again and praise the crew who did our house for the professionalism they showed. Another roofer is doing our neighbors house and the comparison between them and your crew is like night and day.

In every way your crew was totally professional and mature- in their work ethic, the number and length of breaks taken, their language, comments made and skill.

Thank you. We are very well pleased with Nick and his crew and as we watch these other guys the differences are enormous.

Cathy and Mike
