To Brad Reagh

Re: Our new Kasselwood Roof

We found out about Supreme Roofing Solutions Inc. and their Kasselwood products when we were out looking at roofs done by other companies. We came across Brad's sign in front of a house where Supreme Roofing had done the roof, and since he wasn't on our original list we phoned him right then and there. He came to our house that same day and provided us with a wealth of knowledge on various metal roofing systems as well as traditional asphalt shingles. He was also able to provide us with a quote on the spot.

The installation took only one day, and that included getting tearing down two layers of old asphalt shingles. The crew also replaced some wood sheets that were in bad shape, put in new vents and ridge caps. They also installed the skylights that we had already ordered to replace the skylights that the previous owners had boarded over.

The crew was fast, polite and obviously good at their work. They took the time to let me come up on the roof and explained to me what they had done with the flashing around the chimney and on the skylight installation. When they finished for the day, they cleaned the yard right back to how it looked when they arrived that morning.

It has only been a few days since the roof went on and since then the temperatures have gone up to 27C during the day. Normally temperatures like this mean that the upstairs bedrooms are sweltering hot at night, making it impossible to have a good night's sleep. The most immediate difference since the new roof is that the indoor temperature is much cooler than the hot summer days outside.

I would absolutely recommend Brad and Supreme Roofing Solutions Inc. products to anybody looking to replace their roof.
